

## Disclosure of Material Information

### Sulaimani-Iraq February 2015

The vast majority of Asiacell's network continues to operate as normal, delivering mobile services across more than 90% of Iraq's population. In some insecure regions; Asiacell has been forced to limit services which has inevitably affected service quality. The affected areas include parts of Mousel, Salaheldeen, Diyala and Anbar. It is important to emphasize that those subscribers who moved from one turbulent region to another, continued to enjoy the full spectrum of our services normally. Finally, Asiacell remains in ongoing dialogue with the Iraqi government to reach a resolution to the situation."
